

Product name: UNUS

Team name: Bigas Unus (team one)

Release date: July 24, 2023

Sprint 3 plan

**Goal:** Make the shell of the website with login capabilities and a stored profile for the user to sign back into.

**User story 1:** As a user I want to be able to play the music in my library directly from the application.

1. Implement the Spotify playback SDK (5 hours)
2. Implement the Soundcloud playback widget (5 hours)

Acceptance criteria: Music is playable from both spotify and soundcloud. Test that full playback functionality is working (i.e. pause, play, restart)

**User story 2:** As a user I want to be able to choose which applications I want to link to my account:

1. Add a page that allows the user to connect their spotify and/or soundcloud accounts to their UNUS account (5 hours)

Acceptance Criteria: Spotify authorization and Soundcloud user ID upload all work properly and don't break the code already implemented. All routing works properly. Users can't access this page before logging in.

Additional tasks unrelated to a specific user story:

1. Make the front end look cleaner and more visually appealing (5 hours)

**Roles:**

Daniel: PO/developer

Vignesh: Scrum Master/developer

Bijaya: Developer

Max: Developer

**Task assignment:**

Daniel: Front end design (add.)

Vignesh: Add connection page (US 2.1)

Max: Implement music playback (2.1, 2.2)

Bijaya: Implement music playback (2.1, 2.2)

## Burnup Chart:

The goal is weekend off and then steady but rapid progress throughout the week

## Scrum Board:

Sprint 1 | UNUS

User Stories	Tasks not started	Tasks in Progress	Tasks Finished
Account Linking	Adding a page to link spotify and SC accounts		
Music playback	Integrate Spotify SDK		
	Integrate Soundcloud widget		

Additional:	Frontend cleanup		
-------------	------------------	--	--

**Scrum Times:**

1. 7/17 12:30pm(est.)
2. 7/18 4pm(est.)
3. 7/19 12:30pm(est.)
5. 7/23 4pm(est.)

**TA Meetings**

1. 7/17 5:30pm
2. 7/20 10am
